

PERSONAL INFORMATION

Name: **NICOLAS SHELEVOY SHELEVOY**

Direction **ALBA ROSA AVENUE
NUMBER 13
OLOT (GIRONA, SPAIN)
17800**

Phone number **+34690011883**

Email **nico_dev@protonmail.com**

Nationality **Spanish**

Born **12/11/86**

WORK EXPERIENCE

• Company name

1. Indra (www.indragroup.com), 01/2026 - present, Java Software Architect, A seasoned Software Architect specializing in Java-based enterprise systems, responsible for designing, governing, and evolving large-scale, distributed platforms with a strong focus on scalability, resilience, and maintainability.
2. **Ceva Logistics** (<https://www.cevalogistics.com>), 03/2022 - 12/2025, contributed to the design, development, and maintenance of multiple enterprise-level applications within an agile **SCRUM** environment, ensuring scalability, reliability, and clean architectural design across various Java-based systems.
Key Projects:
 1. **Microservices project (JDK 11, Spring Boot)** – Developed and maintained RESTful microservices with comprehensive endpoint testing using **Rest Assured**. Managed repositories through **GitLab** and implemented automated CI/CD pipelines with **Jenkins** and **Kubernetes Dashboard**.
 2. Monolithic Web Application (JDK 8, Spring MVC) – Enhanced and maintained a legacy PrimeFaces web application. Managed database versioning with Liquibase and conducted automated UI testing with Selenium. Utilized GitLab, Jenkins, and Kubernetes for continuous integration and delivery.
 3. Microservices project with Hexagonal Architecture (JDK 21, Spring Boot, AWS EC2) – Designed and implemented a modular, maintainable microservices ecosystem following hexagonal architecture principles. Utilized Spring Boot, JPA/Hibernate, and Kafka for event-driven communication. Defined and documented APIs with OpenAPI 3 and Swagger, containerized environments with Docker, and worked with PostgreSQL and H2 databases. Ensured quality and resilience through extensive JUnit testing and CI/CD automation, deploying the solution to an AWS EC2 Linux instance with Docker-based runtime and hardened security groups.
3. **AtSistemas** (<https://www.atsistemas.com>), 04/2021 - 03/2022, Senior Java Developer:
 1. Spring Boot Refactoring and Code Quality Enhancement – Performed a full clean code refactor of a Spring Boot application, leveraging Kiuwan for code quality analysis and integrating Jenkins and OpenShift for continuous delivery. Collaborated closely with the QA and DevOps teams under SCRUM methodology.
 2. Microservices Web Application Development – Designed and developed a Spring Boot-based microservices web application featuring Spring Cache, Apache Camel for message routing, and an embedded Tomcat server for lightweight deployment. Actively participated in SCRUM sprints for iterative delivery.
 3. Unit Testing and Coverage Improvement – Increased unit test coverage across several Spring-based projects using Mockito, JUnit, and Jacoco, with test execution and reporting integrated into Jenkins and OpenShift CI/CD workflows. Operated in a SCRUM environment.
4. **EVERIS** (<https://www.everis.com>), - 10/2020 - 04/2021, Java developer (Java11/8, Hibernate, Spring, AngularTS and MySQL):
 1. Full stack development: Spring Boot webapp, Spring MVC, Spring Web, AngularTS, embedded Tomcat Server and MySQL database. Working in a SCRUM environment.
 2. Maintenance and development of a Spring Boot webapp on JDK 11, Camunda 7.15, JPA, embedded Tomcat, MongoDB, Kafka, Mockito unit tests, Selenium automated tests, Jenkins for CI/CD and on a Bitbucket repository. Working in a SCRUM environment.
5. **HIBERUS** (<https://www.hiberus.com/>), - 12/2019 - 08/2020, Java backend developer. Maintenance and development of a project:
 1. Full stack development: Webapp on JDK 7 (client: a European Union Intellectual Property Office) with Spring Data, Spring MVC and Spring Web, JPA, Kafka 0.9, Primefaces, Apache Solr for data indexation, Bitbucket as a code repo, Jenkins for CI/CD, Tomcat server and MySQL Working in a SCRUM environment.
6. **GFI** (<https://gfi.world>), - 07/2017 - 12/2019, J2EE backend developer. Maintenance and development on various projects:
 1. JSE Java webapp with web servlets, JDBC, MySQL and Tomcat.
 2. J2EE web application on JDK 7, Struts framework, Jboss server and Oracle database (PL/SQL)
 3. J2EE web application on JDK 7, Spring data, Spring MVC, Spring Web and Spring Security, JPA framework, Jboss server and Oracle database
 4. Full stack development: Spring Boot webapp on JDK 8, Postgre SQL database and Weblogic
 5. 3 webapps on JDK 7, Spring, JPA/Hibernate, Jboss server and MySQL database

- 6. Full stack development: Spring Boot app on JDK 1.8, MySQL, embedded Tomcat and Angular JS
- 7. Full stack development: Spring Boot app on JDK 1.8, MySQL, embedded Tomcat and Angular TS
- 7. **SIONIN** (www.sionin.com), - 09/2015 - 07/2017, Android developer with: Android SDK + Java 8 and SQLite
- 8. **Espinosa** (www.espinosaconsultora.es), - 04/2014 - 09/2015, backend ERP development with: PHP, HTML, CSS, JS, MySQL
- 9. **Ambigrama comunicaciones** (www.ambigramaec.com), - 01/2013 - 05/2013, full stack developer with: PHP, HTML, CSS, JS and MySQL
- 10. **Freelancer**: Web programming and design with: PHP, HTML, CSS, JS and MySQL
- 11. **Antisa Componentes** (www.antisa.es - 11/2012 - 01/2013, (+34) 965 44 55 65), college practice (380 hours): Web programming, design and e-commerce with Magento.
- 12. **Freelancer**: Web programming and design with: PHP, HTML, CSS, JS and MySQL

• **Sector** Information technologies

EDUCATION

- **Dates** (*from – to*)
 - 2000-2004: Salesianos San José Artesano (Elche): E.S.O. 1º - 4º grades.
 - 2004-2006: San José (Murcia): High School.
 - 2007-2009: University of Alicante: 1st degree of Computer Technical Systems Engineering career.
 - 2010-2012: HNC Severo Ochoa: DAI (Computer applications development) + practice.
 - 2013-2014: University of Alicante: 2nd degree of Computer Technical Systems Engineering career.

• Main skills and capabilities

My **main skill** from October of **2017** until now is a Java (JDK 8-21) development using frameworks like Spring, Spring Boot, Hibernate or JPA. Also did some development in the beginning of my career with the Struts framework. Giving support for **PostgreSQL, MySQL and Oracle SQL databases**. As to the app deployment, in most of legacy projects I worked it was realized manually on VMs like **Apache Tomcat (6,7,8), JBoss** and **Wildfly** but **since 2019 it was mostly a** micro-services development using Spring Boot in container-based Kubernetes platform called OpenShift and Kubernetes itself.

Most of the time, I am giving support and implementing new developments on projects that uses **Spring Boot**, but since 2021 all the projects I worked at are also based on hexagonal architecture and consist of 2 parts: an API and a BFF (backend for frontend). The API consists of an OpenApi 3 project which is deployed as an artifact and used by the BFF to generate sources which are lately implemented inside the api-rest and domain modules leaving the logic to the application module.

Implemented as Kafka producer from zero on an existing application as Kafka consumers. In message streaming development also have around 3 months of experience with Amazon SQS developing a consumer.

Worked with **Camunda workflow and bpmns** at my latest job in Everis. The final client was EPO where had to design new and edit already created workflows. Mostly of my tasks were develop workflows, worker handlers which use micro services or just simulate a casual user task.

At GFI I **gave support to more than 6 Java projects simultaneously**, so I have experience on working with multiple applications at the same time, I didn't really enjoy it, but I can if I have to.

The most curious experience that I had was probably when I **did the migration from Apache Tomcat to Wildfly 14 servers for 3 applications**, that was at GFI as well, many dependencies had to be changed so almost half of the code had to be also rewritten.

In Sionin I had **developed two Android applications** from scratch which are **ConexWork** and **OhMyCut!** Between four of my colleagues, we designed the whole application logic and database. That was a great group development experience, I was in charge of the Android part for those applications. Thanks to this job I received my first Java 8 and Gradle engine experience.

Had some occasions to configure payment gateways using Java and PHP. In case of Java, I implemented a payment system using Bankontakt and in case of PHP a payment system was done manually by calling a bank terminal API.

Some programming languages and technologies I studied and worked with during my career are:

- Backend and structural programming: JAVA EE/JAVA2E (Swing, Spring, Spring Boot and Struts frameworks), C/C++ (University and HNC), Python (Code academy course), Delphi (Delphi 6 and RAD Studio 6 and 8), PHP (Yii2, CakePHP).
- Java plugins and frameworks: JPA and Hibernate, Spring Security, Apache SOLR, Apache Camel, Camunda, Elastic search Logstash and Kibana package, Liquidbase, Bankontakt payments system, Kafka Admin API, Kafka Consumer API, Kafka Producer API and Kafka Streams API.
- Java test technologies: Junit Mockito, Rest Assured, Selenium, Gherkin, Cycle and Jmeter
- Frontend programming: HTML5, CSS3, jQuery, JS and Angular versions 1 and 10 (JS & TS).
- SQL Database: PL/SQL, MySQL / MariaDB and Postgres SQL.
- NoSQL Database: MongoDB
- Low level programming on technologies like Assembler for MIPS architecture chips on MARS environment and VHDL environments.

- Logical programming with Prolog.

<u>MAIN LANGUAGE</u>	Russian
<u>OTHER LANGUAGES</u>	Russian, Spanish, English
• <u>Lecture</u>	Russian, Spanish, English
• <u>Written</u>	Russian, Spanish, English
• <u>Spoken</u>	Russian, Spanish, English

<u>DRIVING PERMISSION</u>	Type B
---------------------------	--------

COURSES

- Projects in Enterprise Java (https://subscription.packtpub.com/video/application_development/9781789341775)
- Java Servlets and JSP - Build Java EE(JEE) app in 25 Steps (<https://www.udemy.com/course/learn-java-servlets-and-jsp-web-application-in-25-steps/>)
- Spring Framework Master Class - Java Spring the Modern Way (<https://www.udemy.com/course/spring-tutorial-for-beginners/>)
- Angular 1: From Zero to Hero (<https://www.udemy.com/course/angularjs-from-zero-to-hero/>)

Projects I worked

- Ceva Logistics
 - EPO
 - EUIPO
 - EDF
 - GFI – internal apps
 - Clarke Monet
 - Coded and designed a small social network project while I was studying the HNC which was written on JAVA SE and MySQL database.
